PROFESSIONAL SUMMARY

Frontend Developer with 4+ years building high-traffic, SEO-optimised web platforms and enterprise portals at scale — including CNBC TV18, News18 Group (4M+ monthly impressions), and an enterprise logistics platform serving UAE operations. Specialises in Next.js, React.js, Vite, and TypeScript with hands-on experience in microfrontend architecture, live tracking integrations, Core Web Vitals optimisation, and full-stack delivery. Targeting Senior Frontend Developer roles at product-focused teams.

SKILLS

Core Frontend	Next.js, React.js, Vite, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3
Backend & APIs	Node.js, Express.js, REST API Integration, Microservices, Prisma ORM
Database	PostgreSQL, Supabase, MongoDB
Architecture	Microfrontend (Module Federation), Microservices, Component-Driven Design,
SSR/SSG	
Performance & SEO	Core Web Vitals, Lazy Loading, Image Optimisation, Google Search Console
DevOps & Tooling	GitHub Actions (CI/CD), Git, Linux CLI, Webpack, npm
Integrations	Live Tracking Maps, Razorpay, Google Ad Manager, Third-Party Ad Networks

EXPERIENCE

Software Engineer, Altruist Technologies Pvt. Ltd.

Aug 2021 – Present

News18 / CNBC TV18 / Storyboard18 — High-traffic media platforms

- Grew Storyboard18 organic search impressions from 100K to 180K (+80%) and News18 Group impressions from 2M to 4M (+100%) by implementing Next.js SSR, semantic HTML, and structured metadata across article and category pages.
- Reduced page load time from ~10s to ~3s on Storyboard18 by migrating to SSR/SSG and introducing lazy loading and image optimisation — validated via Lighthouse; improved user retention on slow-network mobile devices.
- Delivered the complete Storyboard18 website — frontend UI modules, dynamic story pages, About Us, and media sections — within a 3-month timeline, going live with zero critical defects at launch.
- Built real-time election result dashboard for News18 Election 2023 covering live data updates across 30+ constituencies without page refresh, using polling and Redux state management.
- Integrated Google Ad Manager and third-party ad scripts across 5 News18 Group properties, enabling monetisation at 4M+ monthly impressions with under 2% impact on Core Web Vitals scores.
- Standardised Redux-based state management across 3 large-scale Next.js projects, eliminating prop-drilling across 10+ component layers and reducing inter-component data bugs reported in sprint reviews.

Tawseel Logistics — Enterprise fleet & logistics portal | portal.tawseel.ae

- Built the complete frontend for an enterprise logistics management portal in Vite + React, serving UAE fleet operations — covering vehicle management, rider management, live GPS tracking, invoicing, expense tracking, and analytics reporting.
- Integrated live tracking maps into the portal, enabling real-time GPS route visibility and fleet status monitoring for logistics operations managers across multiple vehicle fleets.
- Built role-based access for fleet operations — managing secure access to vehicle data, rider profiles, expense records, and reports across different user permission levels.

Bharat Caravans — Travel booking platform

- Built end-to-end booking workflow and 12+ user-facing pages in Next.js; improved Largest Contentful Paint from ~10s to ~3s by optimising image delivery and eliminating render-blocking scripts.
- Architected the Admin Panel as a microfrontend using Module Federation, enabling 3 independent teams to deploy modular dashboards with no shared release cycle.
- Implemented role-based route guarding in React, reducing unauthorised access incidents to zero post-launch across all admin-only routes.

ExploreSathi — Trip planner platform | exploresathi.com

- Built a full-stack trip planning platform independently — Next.js frontend, Node.js backend, PostgreSQL via Prisma ORM, and Supabase for managed database hosting and auth — from zero to production.
- Integrated Razorpay payment gateway with webhook verification and idempotent order processing to handle booking transactions and prevent duplicate charges.
- Designed relational schema in PostgreSQL using Prisma migrations covering users, trips, itineraries, and bookings; leveraged Supabase for real-time data layer and storage.

JobTracking Portal — In-house workforce management | jobtracking.altruistindia.com

- Developed a full-stack workforce management portal used by 500+ employees across Altruist Technologies, covering the complete job lifecycle from assignment through execution to completion — eliminating all manual tracking.
- Implemented a 5-tier role-based access control system — Super Admin, Admin, Project Manager, Team Lead, and Employee — with role-specific dashboards, permissions, and task visibility scoped per login level.
- Built task assignment and progress monitoring workflows in React.js, enabling Project Managers and Team Leads to assign, reassign, and track jobs in real time across teams of varying sizes.
- Configured a GitHub Actions CI/CD pipeline for automated lint and build checks on every PR, reducing broken builds reaching the demo environment to zero over the project lifecycle.

EDUCATION

B.Tech in Computer Science Engineering | CGPA: 8.63/10

2018 – 2022

Swami Vivekananda Group of Institutes, Punjab, India

Higher Secondary (10+2)

2017

Bridgewater International College, Kathmandu, Nepal
